1. Claims 1-11 are allowed.
2. The following is an examiner's statement of reasons for allowance: In response to remarks and Applicant's argument filed on 03/12/2007, Applicant's argument is persuasive. In **claim 1**, applicant states that the limitation "at least one logic assembly, connected to receive an output of signal from said first signal carrying connector, and to process said signal to produce individual output signals intended for plural separate lighting fixtures, and producing a plurality of outputs intended for a plurality of different lighting devices, said at least one logic assembly receiving power for its operation from said output of said power supply." This limitation, in conjunction with other limitation as disclosed in the claim 1, was neither found to be disclosed in, nor suggested by the prior art. In **claim 6**, applicant states that the limitation "powering each of said plurality of lights using a portable power supply; and providing control signals for each of said plurality of lights using the same portable power supply, and using a logic board which is powered from the same power supply which provides power to the lights." This method step, in conjunction with other steps as disclosed in the claim 6, was neither found to be disclosed in, nor suggested by the prior art. In **claim 9**, applicant states that the limitation "a logic board, receiving said control signals from said 5-pin connectors, and processing said control signals to produce individual out control signals for each of a plurality of different ones of said 4-pin connectors based on said processing." This limitation, in conjunction with other claimed invention, was neither found to be disclosed in, nor suggested by the prior art. Amended claims have been considered and upon
